Value betting: odds higher than the true chance

A value bet is a price that pays more than the outcome's real chance of winning is worth. Fair odds express that real chance. When bet365 offers higher odds than fair, the bet has positive expected value. Any single bet can still lose: the edge only shows over many bets.

Example

2.20

bet365 odds

2.00

Fair odds (50% chance)

bet365 pays above fair, so this is a value bet

How fair odds work

Start from Pinnacle, the sharpest bookmaker, and remove its margin. Example: 1.95 / 1.95 implies 51.3% + 51.3%. Scaled to 50% each, fair odds are 2.00.

bet365 at 2.20: edge +10%,
EV +0.10 per unit staked

01. Pinnacle reference price

02. Remove the margin

03. Edge = odds $\div$ fair – 1

04. EV = prob. $\times$ odds – 1

The manual way is slow

01. Odds compared tab by tab

Finding value means checking prices one by one, then doing the fair-odds maths in spreadsheets and calculators.

02. The price is gone

Odds move fast. By the time you click, the value price has often disappeared.

03. Stakes by gut feeling

Without a staking rule it is easy to guess, chase losses or overbet.

04. Hours at the screen

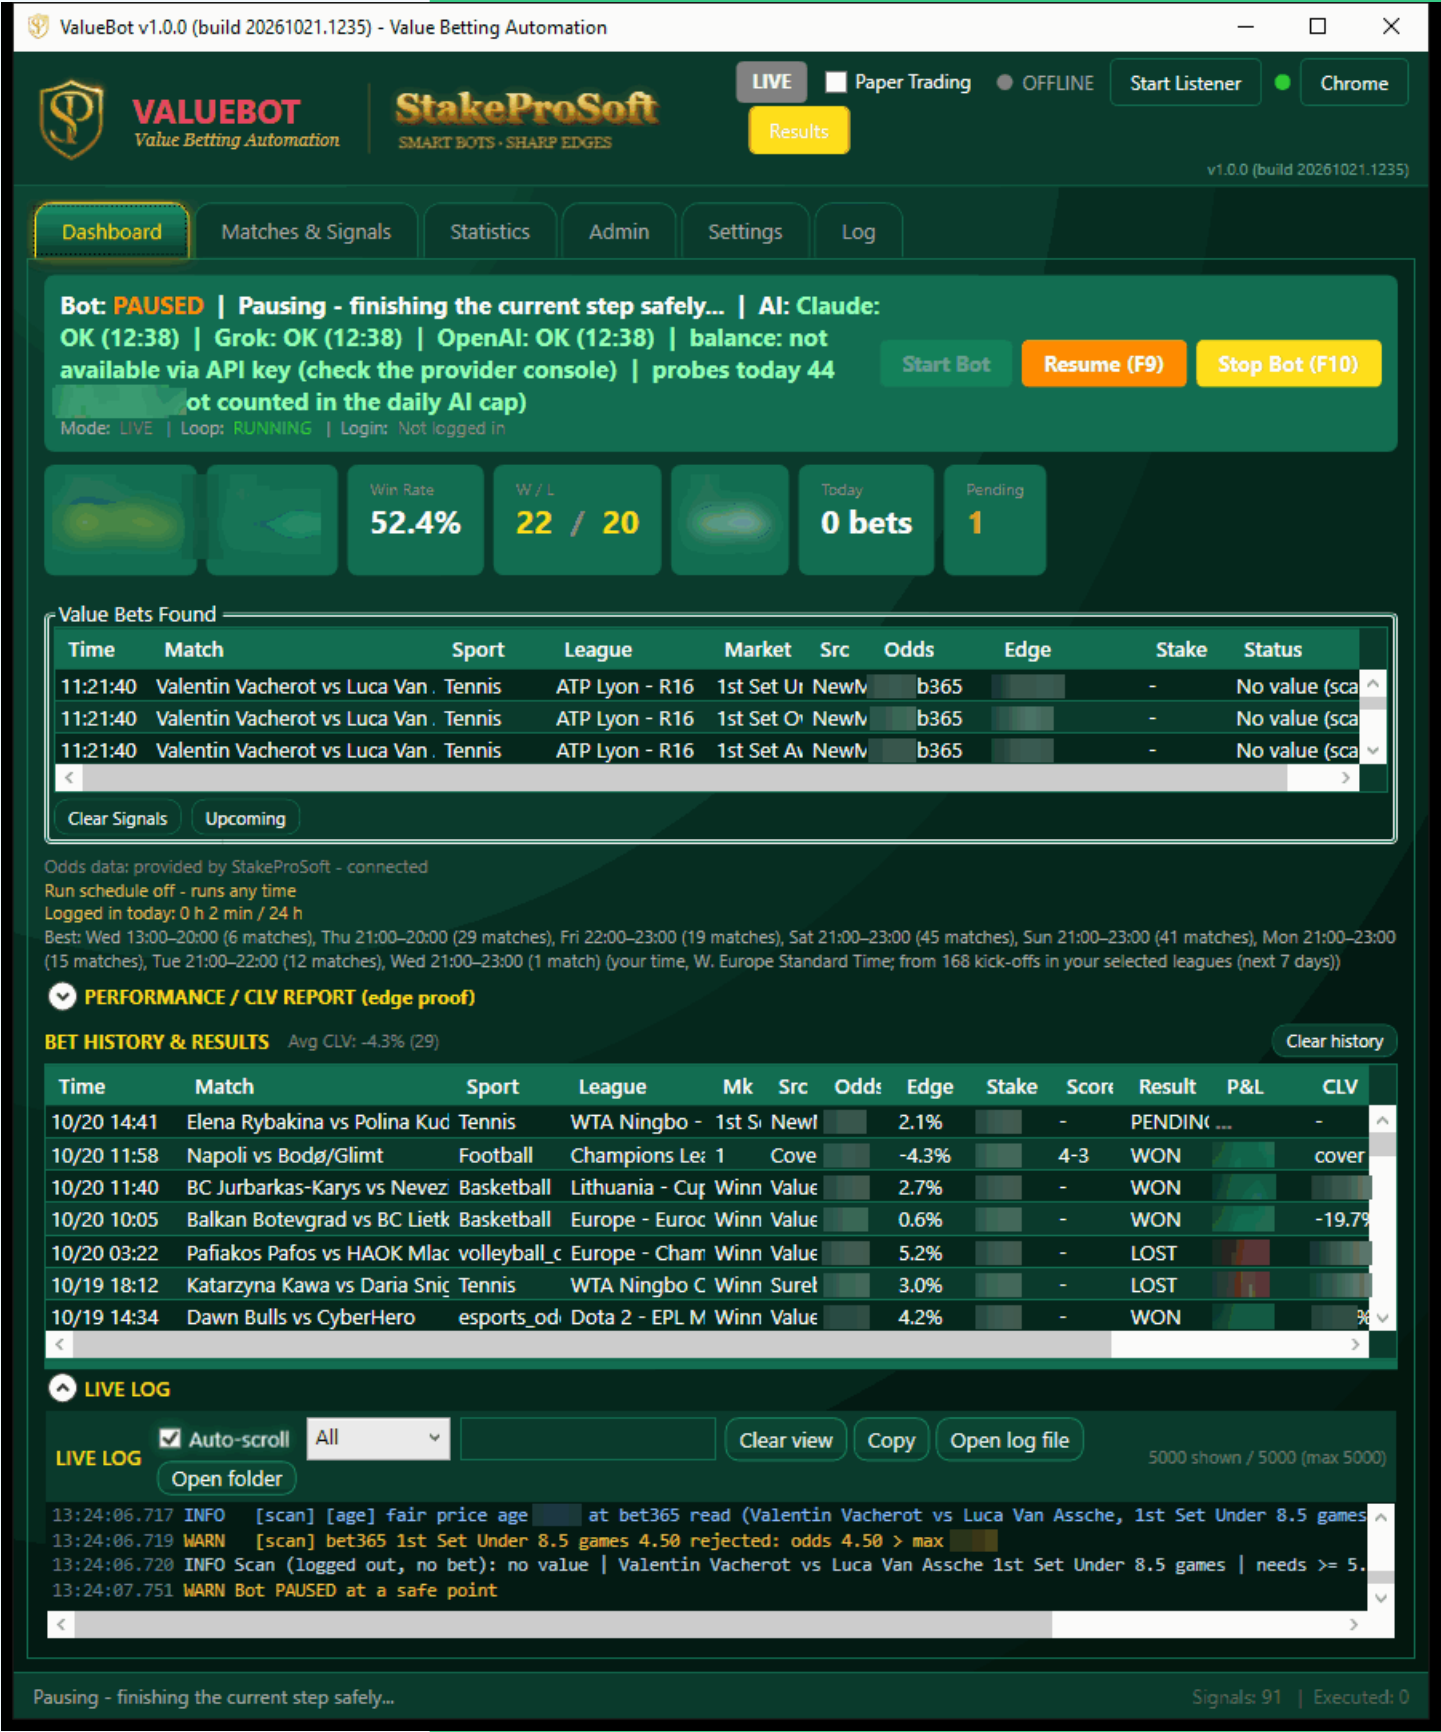

Manual value betting takes hours every day, and proving your edge needs notes you rarely keep.

Meet ValueBot

Windows desktop app

ValueBot compares every bet365 price with margin-free Pinnacle fair odds across 15 sports, pre-match and live, and places singles within your limits.

Start in paper mode with zero risk, then switch to live when the numbers convince you.

How ValueBot works in 4 steps

1

Scan while logged out

Pulls odds from 5 odds feeds and reads bet365 while logged out.

2

Find value vs fair odds

Pinnacle prices become fair odds. bet365 prices above fair by your minimum edge become candidates.

3

Log in, check, bet

Logs in only to bet, re-checks the edge on the live on-screen price and sets a flat or fractional Kelly stake.

4

Log out, settle, report

Logs out, settles bets automatically, tracks CLV and adds every result to the ledger and PDF reports.

5 odds feeds, 15 sports

Every bet365 price is compared with Pinnacle fair prices, pre-match and live singles, with a final edge check on bet365's live on-screen price.

01. Odds feeds, auto source

oddssea (default), The Odds API, StakeProSoft Odds Server, OddsPapi and pinnodds. Auto source picks a working feed; cross-checks block stale or mismatched prices.

02. 15 sports, pre-match + live

Football, Tennis, Basketball, Baseball, Ice Hockey, American Football, Volleyball, Esports, Darts, MMA, Boxing, Snooker, Cricket, Handball and Rugby.

AI inside

Claude, Grok and OpenAI on call

AI is optional and runs on your own API keys. The bot learns from every AI answer, so it needs fewer calls over time.

01. Reads the screen

When normal OCR (text reading) fails, Claude, Grok or OpenAI read the bet365 screen instead.

02. AI tips and health checks

AI tips on upcoming fixtures, plus an hourly credit and status check for each AI provider.

03. Keeps costs down

Learns from AI answers to need fewer calls, and falls back to a cheaper model.

Safety guards built in

A daily bet cap, a daily loss limit and a low-balance guard that stops betting when funds run low.

ValueBot stays off casino pages, never touches deposit, limit or Spelpaus popups, and logs out automatically within Sweden's 24h limits.

18+ only. Bet responsibly.

Gambling involves risk and no betting software can guarantee winnings. Only bet what you can afford to lose.

Need help? Visit Stödlinjen (stodlinjen.se) or [BeGambleAware.org](https://begambleaware.org). ValueBot is independent software, not made by or affiliated with bet365 or Pinnacle.

Settings and presets that match your risk

01. Presets and stakes

Conservative, Standard and Aggressive presets. Flat stake or fractional Kelly with a hard cap. Export and import settings (no keys or passwords).

02. Paper first, then live

Paper mode finds and logs bets with zero risk. Switch to live when the numbers convince you. Every bet settles automatically.

Track every bet, prove your edge

Bankroll curve, outcomes, daily P&L, P&L by market and CLV per bet with a rolling average. Break results down by sport, source and market.

Export CSV and PDF reports, keep daily backups, and check the bot on the Windows and Android monitor app.

CLV tracked on every bet
