Stake Project Iceberg Roulette Bot 2027

Project Iceberg: patience, automated

The Iceberg predictor waits for its entry points. Our robot reads its output and clicks for you.

18+ · Gamble responsibly · No bot guarantees profit

1. How the game works

> Roulette spins are independent with a fixed house edge. Waiting for entry points is about controlling exposure and pacing, not beating the wheel.

> The biggest risk in roulette automation is overbetting — which is why balance checks and daily stops matter.

2. Bankroll checklist

- Set start bet, progression and active fields in the predictor
- Close predictor settings, then start the clicker
- Use daily win logout
- Watch worst-loss stats and adjust start bets down if needed
- Only play with money you can afford to lose
- Write your limits down before the session starts

> 🧊 The Iceberg bot checks your balance before every bet — if the predicted cost is bigger than your wallet, it simply skips.

3. What the bot automates

- Iceberg predictor with entry-point waiting and multi-algorithm forecasting
- Robot logs in with your cookie, feeds numbers and reads predictions with OCR
- Skips a bet when the predicted cost is more than your wallet
- Fallback minimal red+black bet when there’s no prediction, fairness Change, daily win logout
- Live stats: profits/24h, streaks and worst loss

4. Settings starter list

☐ Base bet sized for a long losing streak
☐ Progression chosen and capped
☐ Stop-loss set
☐ Take-profit / daily win % set
☐ Tested with the smallest stakes first
☐ Review after the session, not during
