# Stake Limbo Bot 2027 with AI

## Mastering Limbo: it’s all about the target

In Limbo you choose a target multiplier and the round either passes it or it doesn’t.
Simple game — hard to play well for hours.

18+ · Gamble responsibly · No bot guarantees profit

## 1. How the game works

> You set a target multiplier, for example 2.00x. If the round result goes past it, you win your stake times the target. If not, the stake is lost.

> Higher targets pay more but hit less often. Low targets hit often but pay little. The house edge is built into every target, so no target is “free money”.

## 2. Bankroll checklist

- Pick a small list of targets you understand instead of chasing huge multipliers
- Size the base bet so it survives a long losing streak at your progression
- Decide stop-loss and daily-win targets *before* you start
- Review results after the session, never during it
- Only play with money you can afford to lose
- Write your limits down before the session starts

> 🤖 The AI never gets to break your rules. It works *inside* the limits you set — stake caps, stop-loss and daily-win always win.

## 3. What the bot automates

- C# Limbo engine driving Chrome via Selenium, with live stats on screen
- Multi-armed bandit target picking: tests your targets and favours the ones performing best in your session
- Optional OpenAI or Claude advisor to help pick targets, tune loss multipliers and size recovery bets — always inside your limits
- Layered session guards: stop-loss, daily-win logout and trailing stop

## 4. Settings starter list

☐ Base bet sized for a long losing streak
☐ Progression chosen and capped
☐ Stop-loss set
☐ Take-profit / daily win % set
☐ Tested with the smallest stakes first
☐ Review after the session, not during
