Stake Bot Playbook

7 guardrails for disciplined automated sessions

Automation does not remove risk — it removes emotion. The players who last are the ones who decide their limits **before** the first bet and let the bot enforce them. This playbook shows the exact guardrails built into StakeProSoft bots and how to set them.

18+ · Gamble responsibly · Crypto trading carries risk · No bot guarantees profit · BeGambleAware.org

1. Fix your session bankroll

Decide a session bankroll you can afford to lose, separate from your main balance. Every StakeProSoft bot sizes stakes from that number, not from hope. Rule of thumb: a base bet that survives a long losing streak at your chosen progression.

2. Set a hard stop-loss

Stop-loss / max-loss walls end the session automatically. Mines and Diamond bots support full bankroll stops and wallet % stops; Limbo, Dice and the wolf.bet / BC.Game Limbo bots use stop-loss / max-win. Set it once — never widen it mid-session.

3. Bank wins with daily-win logout

Chain Roulette, WheelDemon, Neuro Roulette, Variator Pro, Iceberg and the Limbo bots support **daily-win logout**: when today's target is hit, the bot logs out. Locking a good day beats giving it back.

4. Use trailing stops and session pauses

Stake Limbo Bot 2027 layers stop-loss, daily-win and trailing-stop guards. Neuro Roulette adds session pauses. A trailing stop protects profit once it exists; a pause breaks long streak exposure.

5. Don’t chase loss streaks

Progressions recover only within your limits. Choose recovery profiles (e.g. SmartRecovery on HiLo, chained progression on Chain Roulette) that respect your stop-loss, and review results after the session — not during it.

6. Let AI reduce risk, not raise it

Optional OpenAI / Claude advisors on Limbo, Mines, Diamond and HiLo are there to inform decisions. On HiLo the AI risk advisor can only reduce or stop — exactly how an advisor should behave.

7. Local PC vs VPS

> A local Windows PC is simplest for short supervised sessions. A VPS keeps sessions stable and isolated for longer runs — but your guardrails matter more than uptime. Start local, supervise, then move to VPS when your settings are proven.

Pick your bot

Limbo with 15+ strategies and AI Advisor ($249) · Chain Roulette Lifetime ($224) · Mines Lifetime / Diamond Lifetime ($134) · WheelDemon, Neuro Roulette, HiLo, Variator Pro, BC.Game Limbo ($79) · Mines Monthly, Iceberg Roulette, wolf.bet Limbo, Dice ($69).
